

Create a WiFi HotSpot with a press of a finger! Wherever you are - you can connect your laptop or other mobile device to your **iPhone** easily!

<http://www.rockyourphone.com/index.php/mywi.html>

Jailbreak the phone before you get this program

Features:

- Create WiFi Hotspot to connect mutiple laptops or mobile devices to share your iPhone's internet connection
- 40 bit and 104 bit WEP Security to prevent others from accessing your WiFi HotSpot
- Ability to enable USB and Bluetooth Tethering on your iPhone as well
- Broadcasts the Network Name (SSID) - no need to fuss with creating an adhoc network on your laptop
- Uses less battery and much faster then PdaNet due to native routing
- Shows up and down bandwith usage

NOTE: MyWi does not support the iPhone 2G. Please see your carrier contract for eligibility and/or additional fees.

I played around with this all afternoon, and it seems to work great. A nice addition to this app is that you don't have to have tethering enabled from a custom ipcc either, you can enable tethering from MyWi. I had three laptops connected to my phone earlier this afternoon and they all were able to cruise the net quite nicely. [MyWi](#) sells for \$9.99 and is a great application to have on your iPhone. There is a free 10 day trial available also

You can also type in youtube "iphone tethering" and see other options
