

## How to unlock using the software for iphone 3GS 3.1-3.1.2 OS and all previous versions. Solution for all iPhone owners/users who are stuck with BaseBand 05.11.07.

*This package prepared by [www.accessorypal.com](http://www.accessorypal.com)*

Please check following info from your 3GS. Go to settings > general > about > serial number : If it's xx94xxxxxxx(or 88941D5Z3NQ) then it has new iboot rom. So this case better not to unlock your iphone 3GS until new solution come out. If serial number look like xx92xxxxxxx, then please proceed.

1, Make Sure your itunes is upgraded to the latest 9.0.2 version. If you don't have itunes installed you can click on the following link to install it:

<http://www.apple.com/itunes/download/>

Once you have downloaded, please proceed to install itunes.

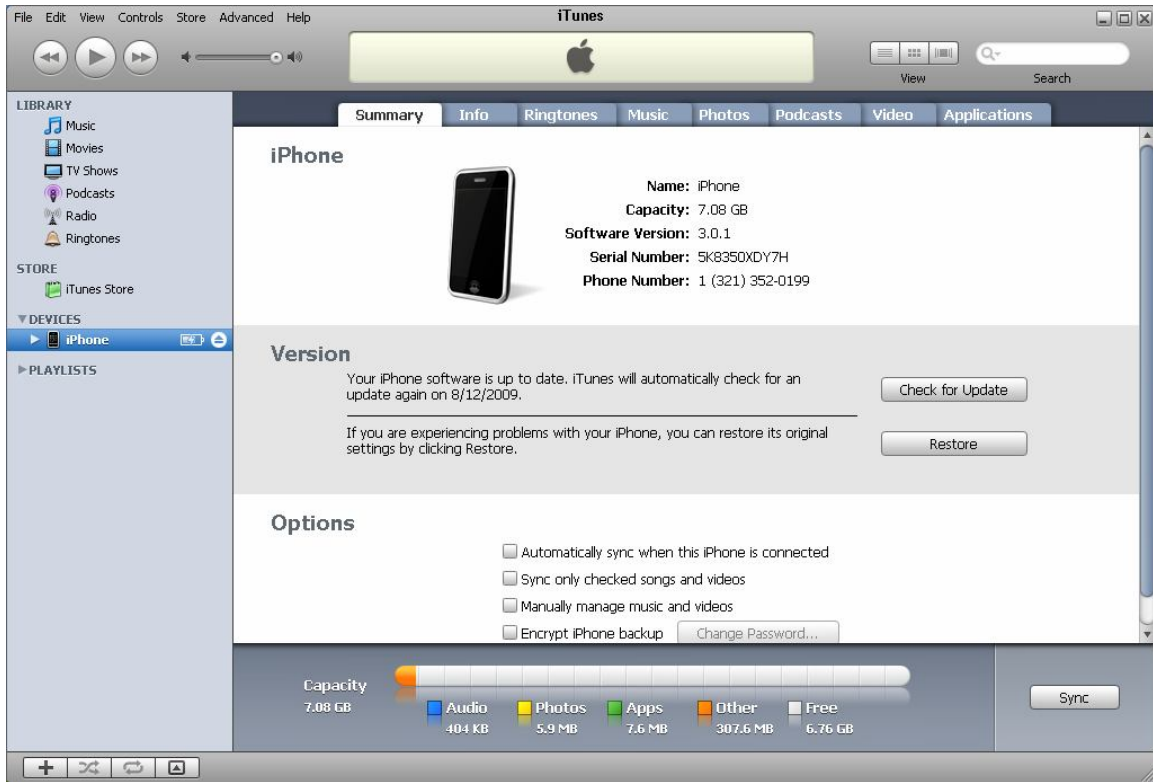

Once itunes has installed, your computer will prompt you to re-boot your compter.

Once your computer has re-started.

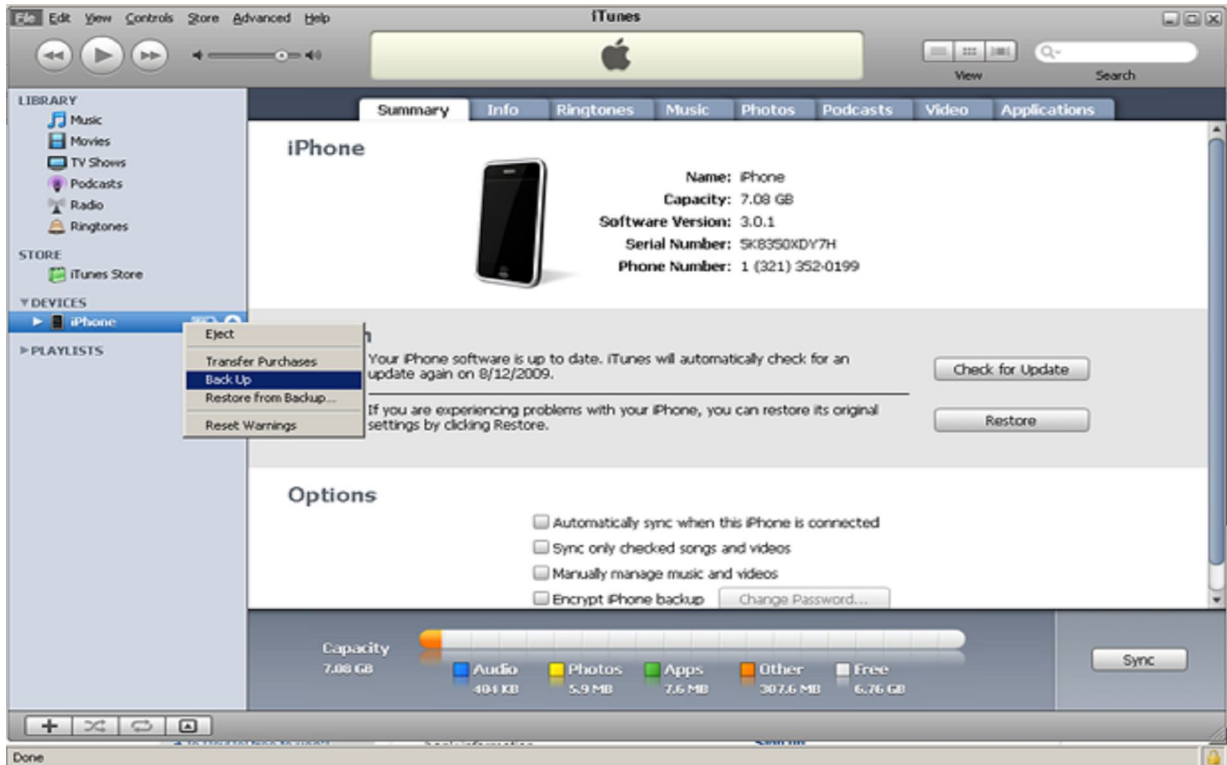

Open up itunes.

**Remove your sim card from Iphone. Only insert after unlocking is done.**

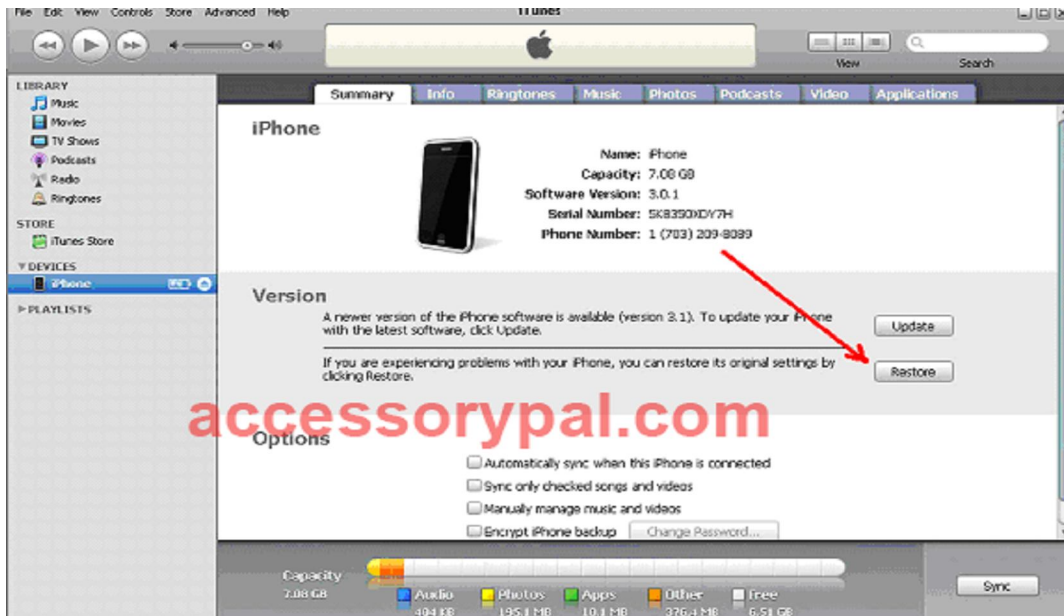

2, Connect your iPhone to itunes

3, Now in the left hand taskbar , right click on your iPhone & select backup.

4, Once your iPhone 3GS has been backed up, select your iPhone from the list of devices on the left. Click the **Restore** button.

Press **Restore** button to proceed. Then Itune update your iphone 3GS.

5, Once your iPhone 3GS has been updated, then please close Itunes. Now you need to download the jailbreaking applications to your computer. (There are already included in [Unlock3GS312.zip](#))

Mac Red Snow: **MAC** >> [blackra1n.zip](#)  
PC Red Snow: **Windows** >> [blackra1n.exe](#)

Then double click the *blackra1n* executable file from the desktop to launch the program

blackra1n.exe

#### Step Four

Make sure your iPhone or iPod is connected to the computer then click the large *make it ra1n* button

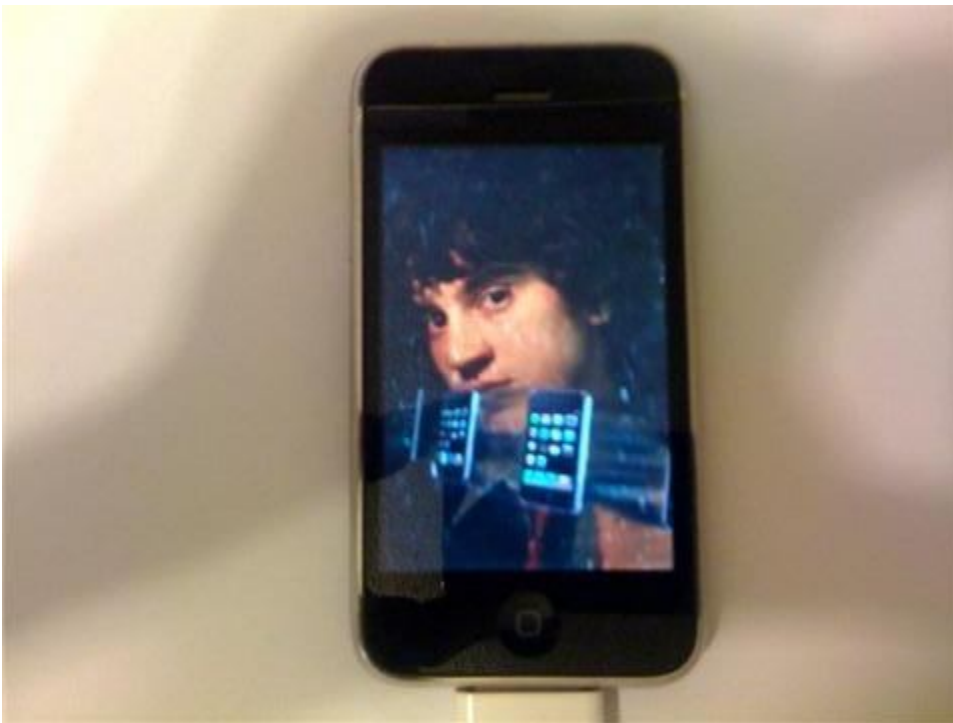

#### Step Five

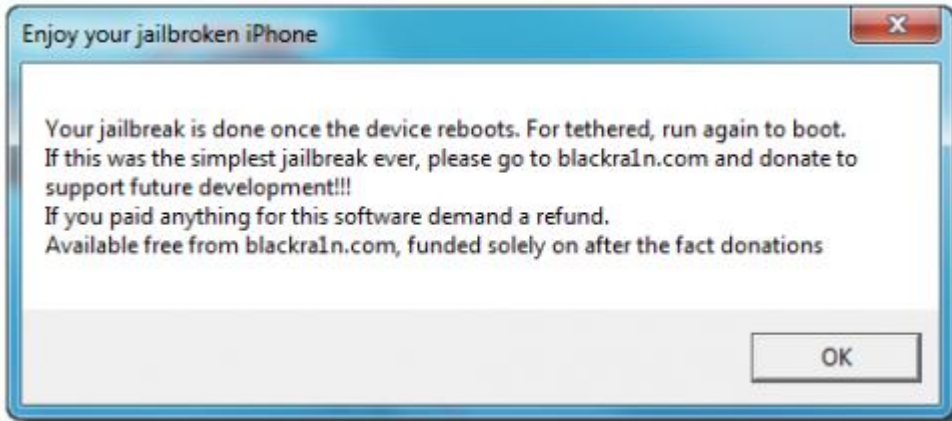

Your iPhone will now be placed in recovery mode.

You will see a picture of GeoHot that replaces the regular recovery mode screen on your device.

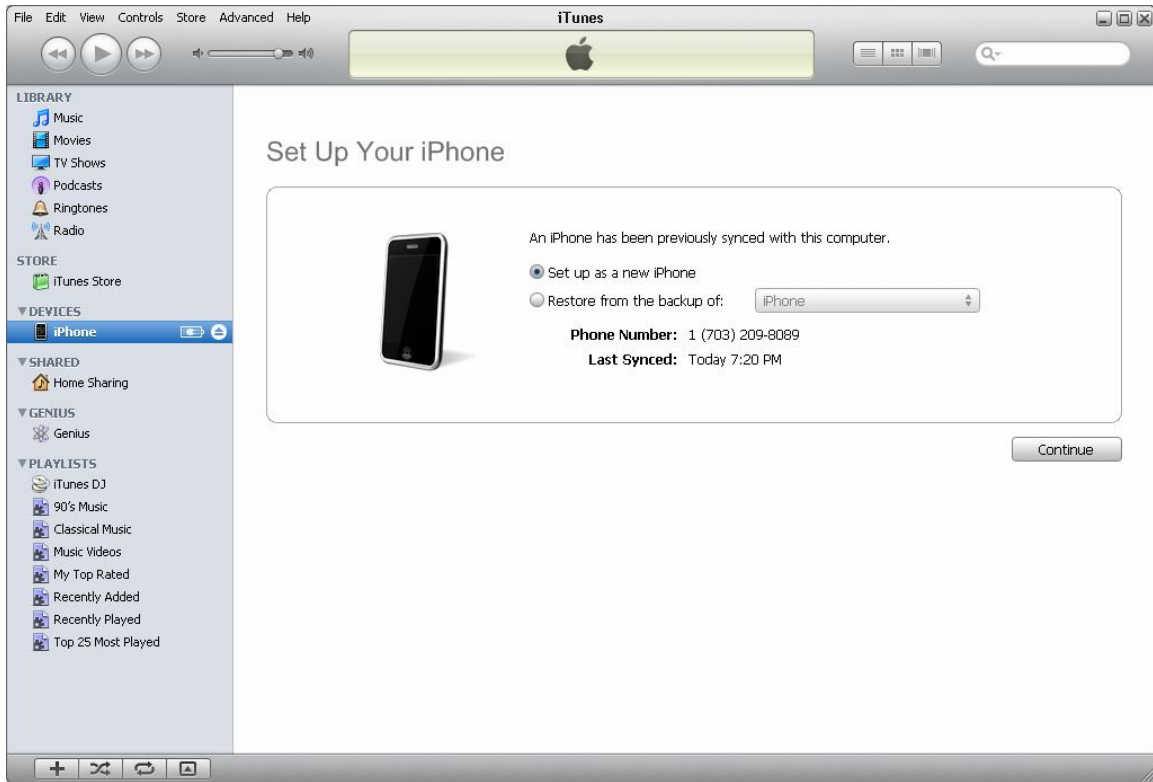

blackra1n will run and then your device will reboot.

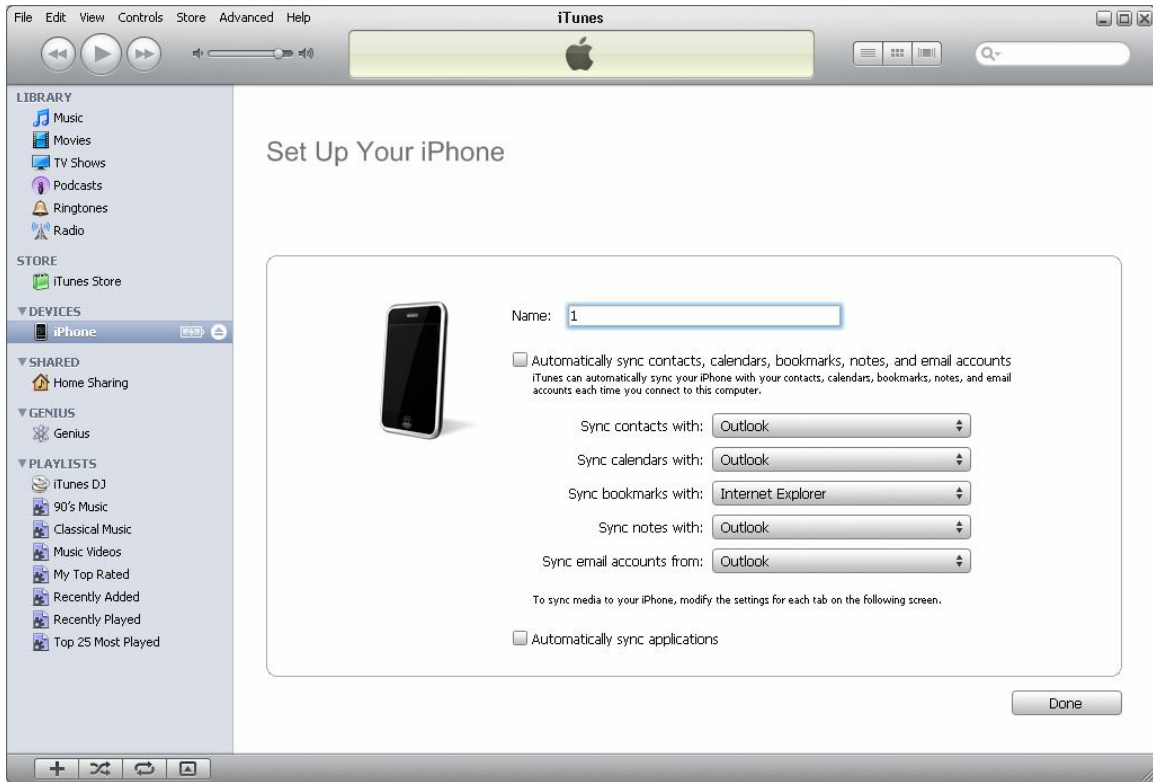

## Step Six

Now you'll see next screenshot:

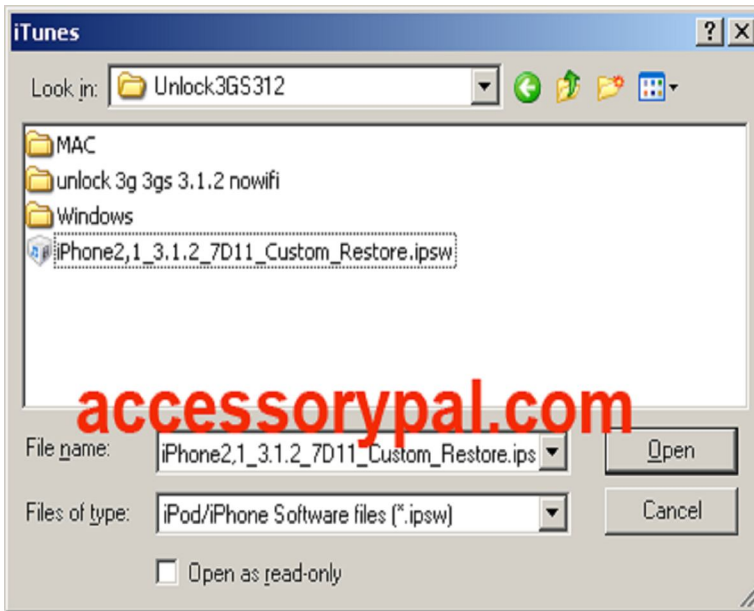

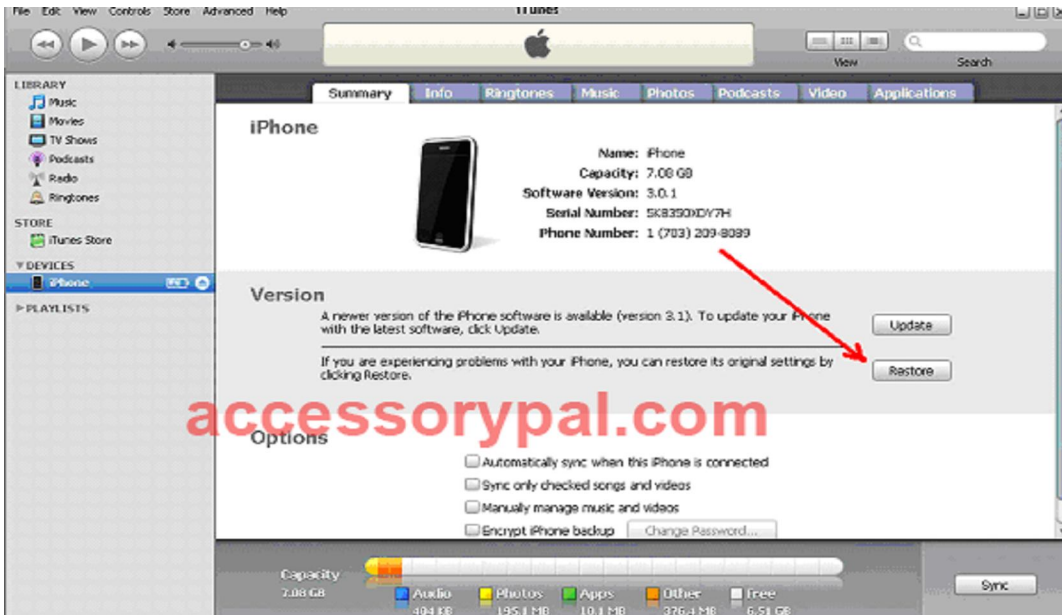

Please select Setup as new Iphone, then deselect both "Auto sync" options.

Now press "Done".

## Step Seven

Select your iPhone from the list of devices on the left. Now hold down **shift (shift key on your computer/laptop keyboard)** and click the *Restore* button. Restore is preferred as it won't create any wasted space on your iPhone. Please select [iPhone2,1\\_3.1.2\\_7D11\\_Custom\\_Restore.ipsw](#) from [Unlock3GS312](#) folder.

Itunes will now update your iPhone 3GS to 3.1.2 with custom firmware. Once your iPhone has been updated to 3.1.2, you will be required to re-activate your iPhone, this is done with your iPhone's original network (AT&T) simcard and if you

don't have the original network simcard then ignore the activation step  
Once your iPhone has been activated, check your iPhone to ensure  
everything is  
there and working, including calls.

### Step eight

Please make sure you upgraded to 3.1.2 OS and modem firmware is  
05.11.07 on your Iphone 3GS.

**From the Home screen , Click Setting->General->About**

**In the About screen, please make sure that the modem  
firmware is 05.11.07**

### Step Nine

#### Let us jailbreak

Then double click the *blackra1n* executable file from the desktop to launch the program

### Step Eleven

Make sure your iPhone or iPod is connected to the computer then click the large *make it ra1n* button

### Step Twelve

Your iPhone will now be placed in recovery mode.

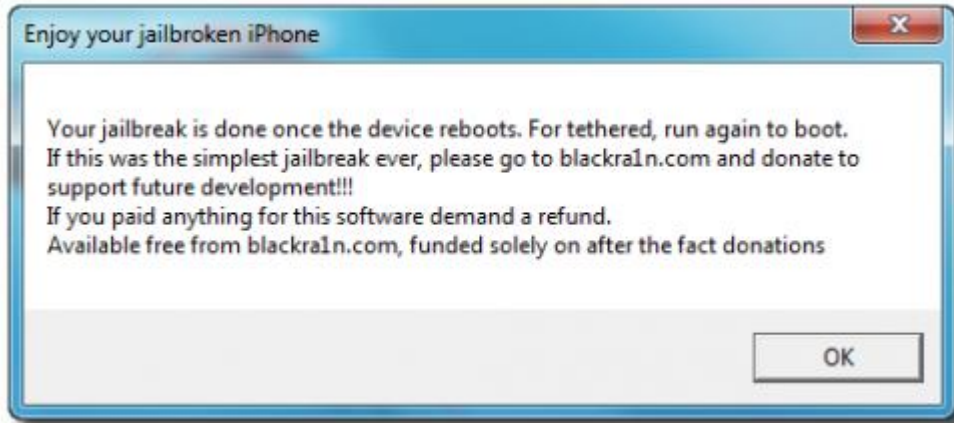

You will see a picture of GeoHot that replaces the regular recovery mode screen on your device.

blackra1n will run and then your device will reboot.

Now your iPhone 3GS is jailbroken.

*If you are having wifi issues. Try a "Reset Network Settings". If your iPhone 2/3GS/iPhone 3 is rebooting into recovery after running blackra1n, this isn't a bug. It's a feature. You need to run blackra1n every time to boot it. This 'feature', called tethered jailbreak. Meaning, if you let the battery die you will need to use BlackRa1n to boot it again.*

#### Step Thirteen

If you are on T-Mobile or any other unofficial network please remember to turn off 3G (settings >> network) before starting...

(Official networks are: AT&T, Rogers etc... that support 3G)

**Now you are ready to unlock using the 1 Click program called extract the unlock 3g 3gs 3.1.2 nowifi on desktop. To unlock run the file Unlock3G,S\_3.01.bat (while your iPhone still connected to PC via USB cable) for PC users.**

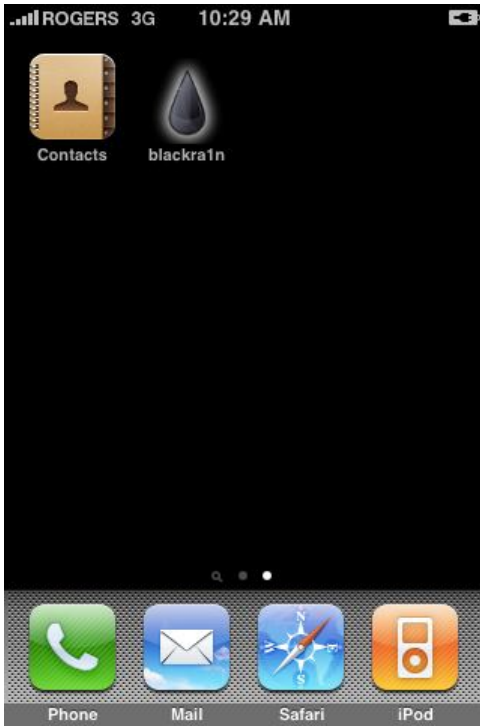

**Reboot (power off and power on) your iPhone and your iPhone will be unlocked. Insert your SIM card and enjoy.**

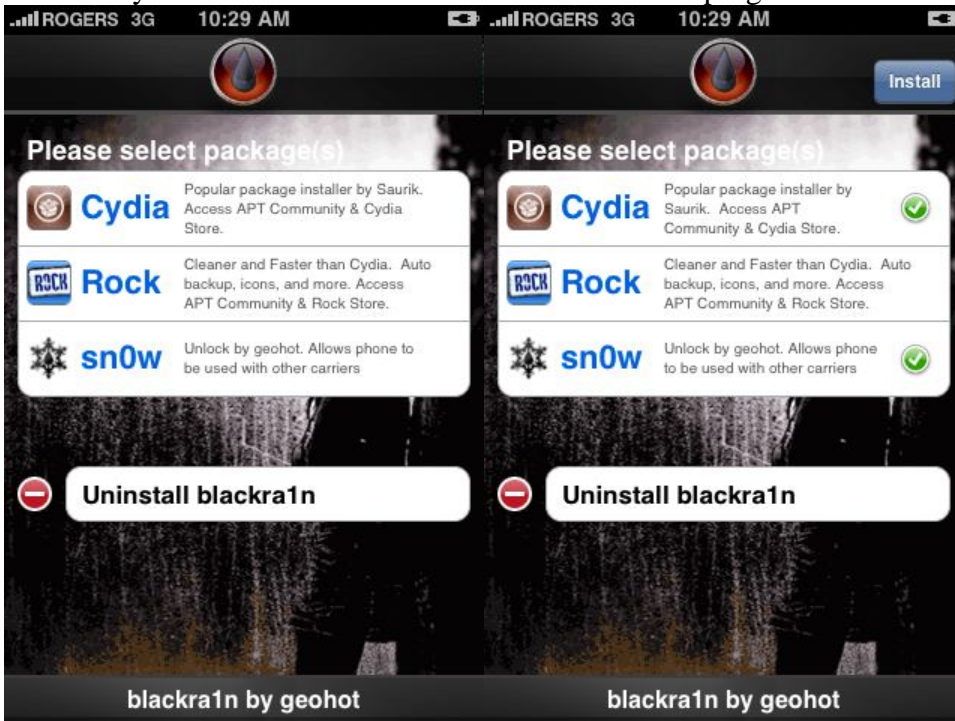

## Mac users Solution if dont have access to Pc to install

Once your device reboots it will be jailbroken and you will notice a blackra1n icon on the Springboard. You will need a wifi connection or a network sim card via which you can connect to the Internet.

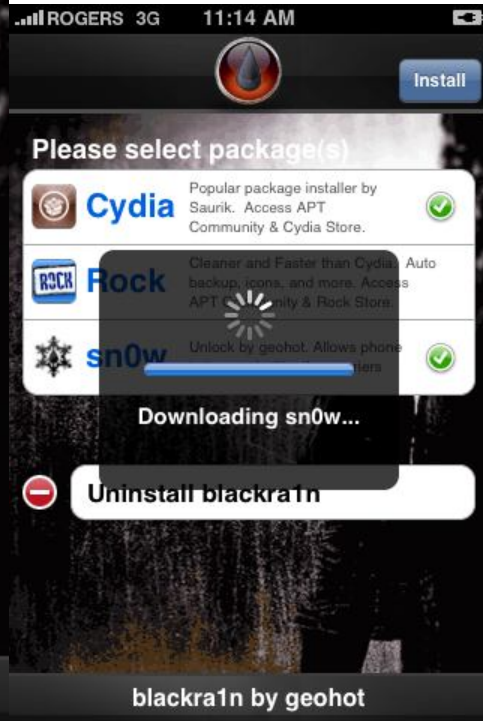

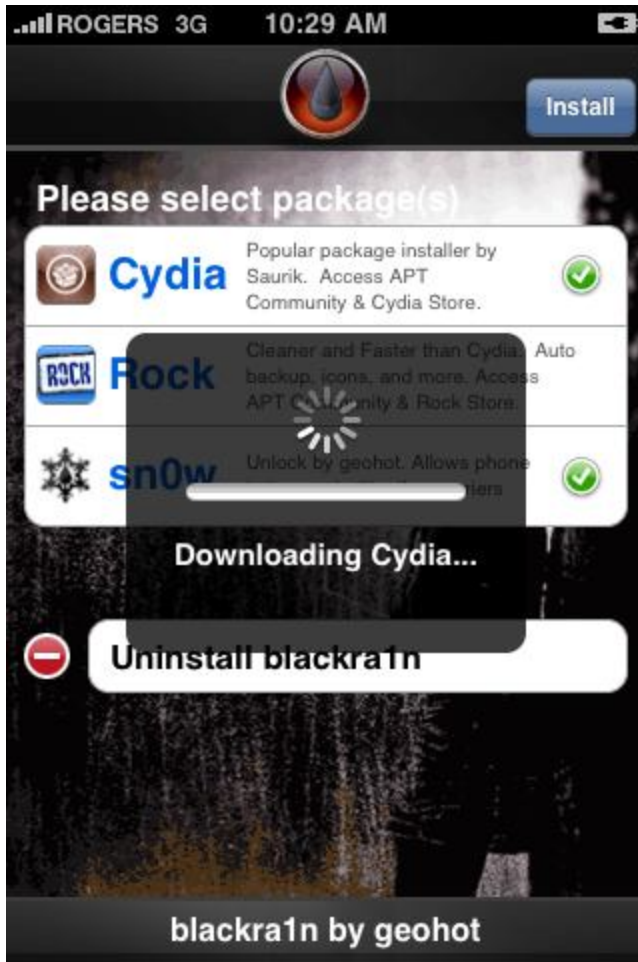

Make sure you have an internet connection(WIFI or edge, 3G) and press to launch the application.

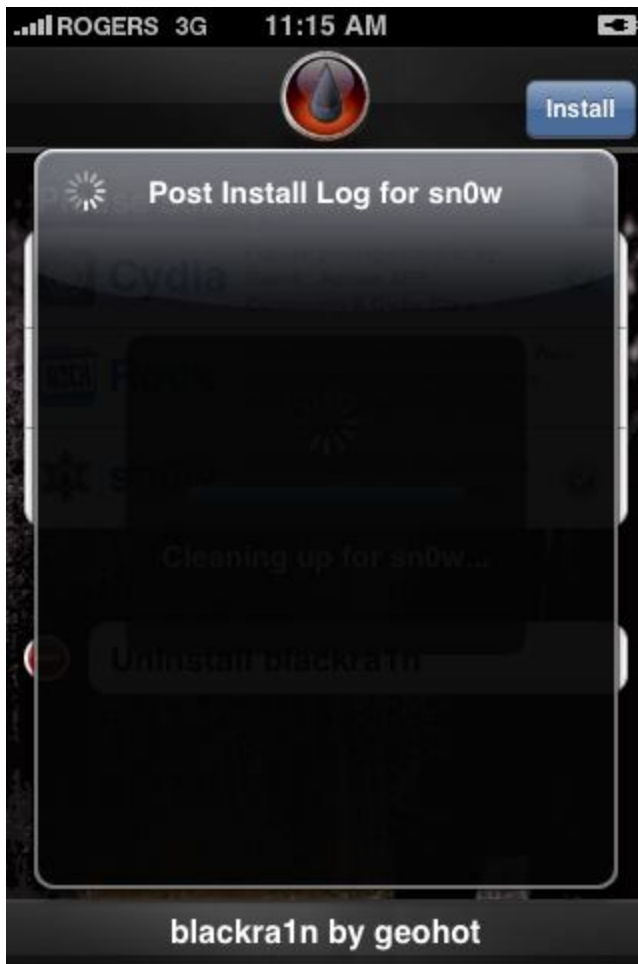

Choose the installer application of your choice then press to select *sn0w* if you would like to unlock your device. Press the *Install* button at the top right of the screen to begin.

BlackRa1n will begin to download and install the package you selected.

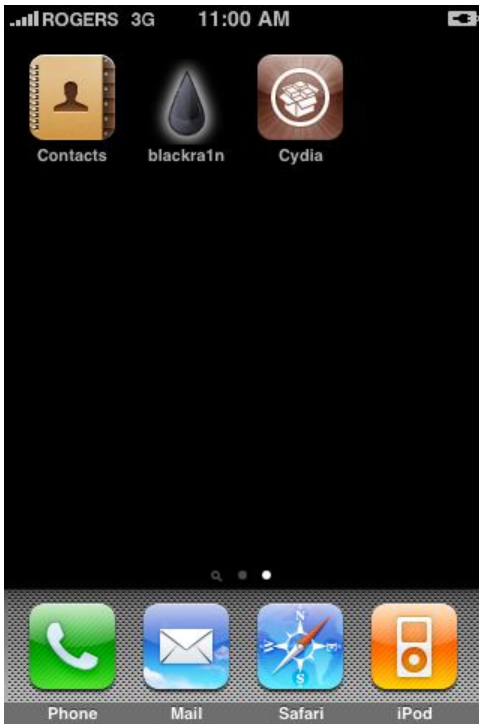

If you chose to unlock device using blacksn0w you will be presented with a Post Install log for sn0w. CommCenter will be restarted and there is no need to reboot. If your carrier doesn't support 3GS then disable it. Press the *Close* button to continue.

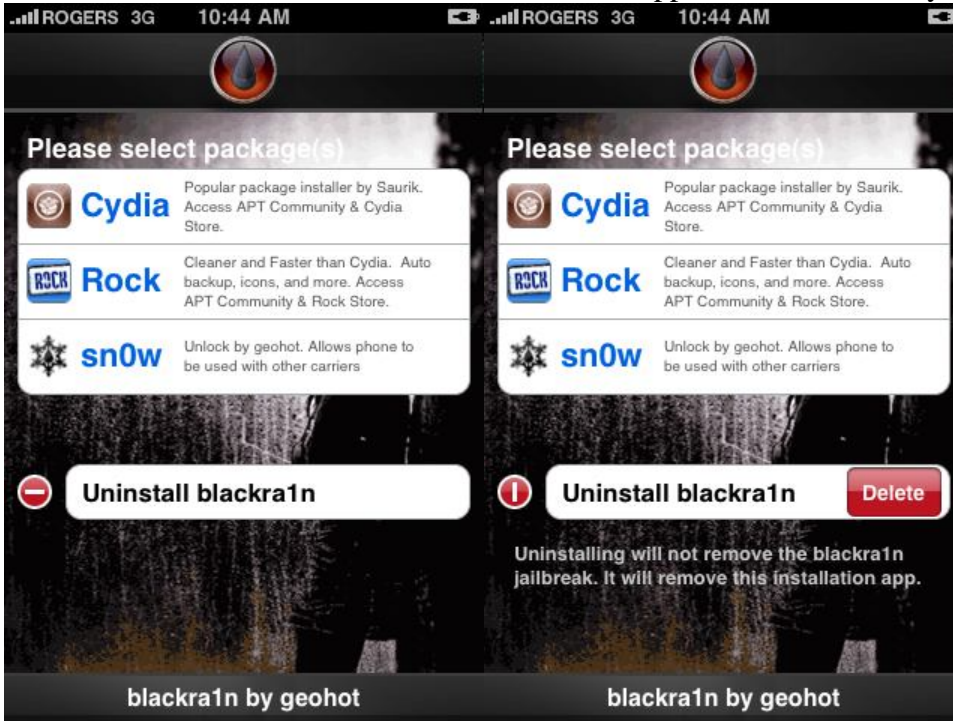

### **Step Seven**

Once complete BlackRa1n will respring your iPhone and you will find the installer package of your choice on the Springboard.

### Step Eight

Once you have confirmed your installer package is working correctly you may use the *Uninstall blackra1n* button inside the BlackRa1n app to remove it from your springboard.

Please reboot your iphone now. Now your iphone is jailbroken and unlocked.  
Insert your sim card and enjoy.

**NOW PLEASE REMEMBER DO NOT UPDATE TO 3.1.3 OR 3.2, 3.3 ... 4.0  
VERSIONS IF YOU WANT TO KEEP YOUR JAILBREAK AND UNLOCK !**
